Specimen:
STOOL

Fecal occult blood is a term used to determine the presence of blood in the feces. It aims to detect subtle blood loss in the gastrointestinal tract, anywhere from mouth to the colon. Blood is present in the feces due to bleeding from the gastrointestinal tract. Positive tests ("positive stool") may result from either upper gastrointestinal bleeding or lower gastrointestinal bleeding and warrant further investigation for peptic ulcers or a malignancy (such as colorectal cancer or gastric cancer).
