SEROLOGY

HEPATITIS B SURFACE ANTIGEN (CARD TEST)

HEPATITIS B SURFACE ANTIGEN	NON REACTIVE	NON REACTIVE	IMMUNOCHROMATOGRAPHY
-----------------------------	--------------	--------------	----------------------

Specimen:
SERUM

HEPACARD is visual, rapid, sensitive and accurate one step immunoassay for the qualitative detection of Hepatitis B surface antigen (HBsAg) in Human serum or plasma. The test is intended as an aid to diagnosis of Hepatitis B infection. Viral hepatitis is a systemic disease primarily involving the liver, and in most cases is caused by one of three viruses: Hepatitis A (HAV), Hepatitis B (HBV) or Hepatitis C (HCV). The antigen found in the envelope of HBV is designated Hepatitis B Surface antigen (HBsAg) and its presence in serum or plasma indicates active HBV infection. HBsAg Rapid Test is a simple, one-step test that detects the presence of HBsAg. HBsAg Rapid Test is a lateral flow immunoassay.

Limitations of the Assay:

1. The test procedure, precautions and interpretation of results for the test must be followed strictly.
2. This is only a screening test. The test does not rule out Hepatitis B infection because HBsAg may not be present in sufficient quantity to be detected at a very early stage of infection.
3. Positive results must be confirmed by other diagnostic procedures and clinical data.
