### SEROLOGY

#### HIV QUALITATIVE (CARD TEST)

HIV	NON REACTIVE	NON REACTIVE	CHROMATOGRAPH Y
-----	--------------	--------------	--------------------

Specimen:  
SERUM

#### Note-

1. Pre & Post test counseling for HIV testing is responsibility of referring physician.
2. A NON REACTIVE result implies that no Anti HIV-1 or HIV-2 antibodies have been detected in the sample by this method. This means that either the patient has not been exposed to HIV-1 or HIV-2 infection or the sample has been tested during the "Window phase" (before the development of detectable levels of antibodies).
3. This is only a screening test. A negative result does not rule out the possibility of HIV infection during window period.
4. All positive test results for HIV 1 & 2 are confirmed using 3 different methodologies as per NACO guidelines:  
Immunochromatography, Enzyme-Linked Immunoassay (ELISA), Chemiluminescence Immunoassay (CLIA)
5. Neonates born of HIV infected mothers may have HIV infection or can be uninfected despite the presence of maternal antibodies to HIV in their blood. Such neonates should undergo additional testing such as polymerase chain reaction (PCR) to ascertain their status of infection
